Goals

- Improving code quality
- Gain confidence in your code
- Learn transferable skills
 - Across coding languages
 - Valuable outside of academia

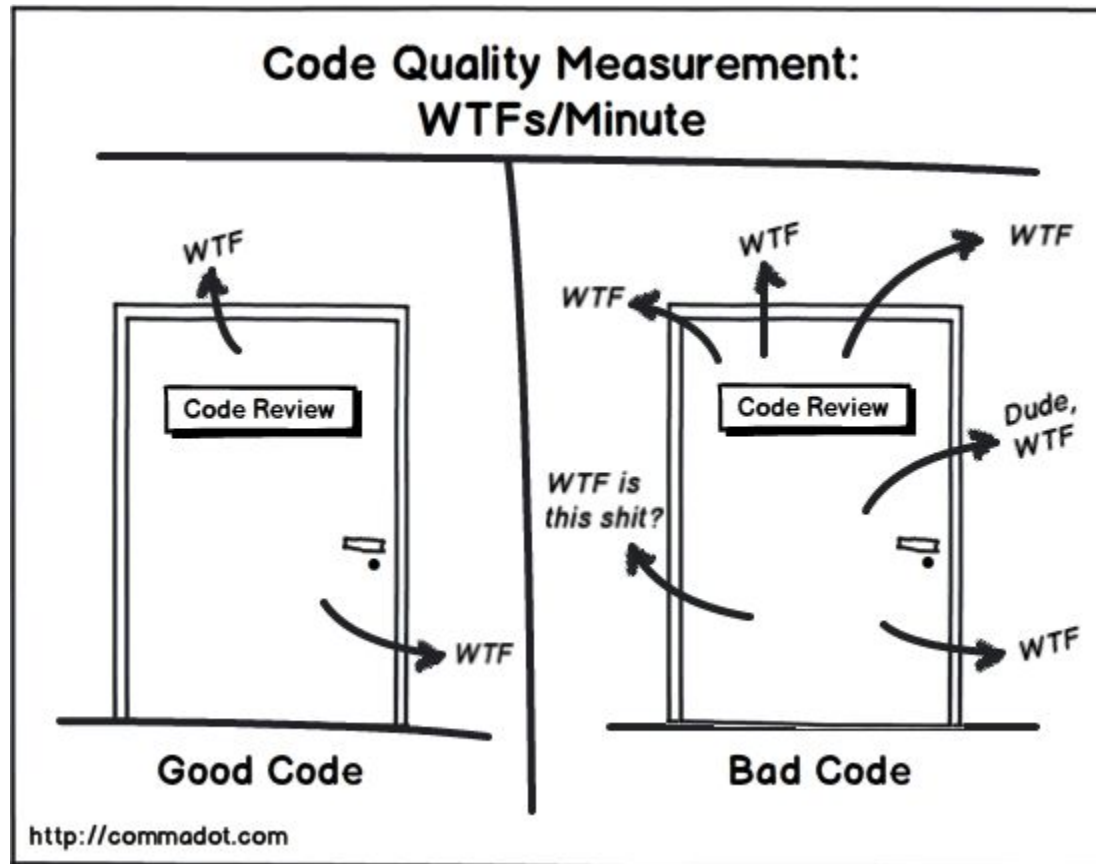

Menu

- Testing code
- Formatting code
- Refactoring code
- Self-discipline
- ~~Self-discipline~~ Automation
- BONUS: Structuring projects

Format

- Me
 - Live demo
 - Live code review / cleaning
- You
 - Try it on your own code (or on provided code)

Format

- Whose code?
 - Mine

- Whose code?
 - Mine

CommitStrip.com

Me in 2012.
I know about if
and for loop

CommitStrip.com

- Whose code?
 - Mine

Me in 2012.
I know about if
and for loop

CommitStrip.com

- Whose code?
 - Mine
- Why?
 - We all have dirty code.
 - Can still be shared.
 - Can be improved.

Me in 2012.
I know about if
and for loop

CommitStrip.com

- Whose code?
 - Mine
- Why?
 - We all have dirty code.
 - Can still be shared.
 - Can be improved.
- Why live demo?
 - We all google stuff.

Testing

Questions

- Who has
 - code on github / gitlab?
 - code on github / gitlab in a public repository?
 - shared the code for one of their paper, thesis?
- Who has told themselves “I need to clean my code”... and never done it?

Why test?

“If I change my (or someone’s) code, I will mess something up / add a bug.

- *I will break the code.*
- *Or worse: it will still run but it will not give me the same results.”*

Testing: why?

“If I change my (or someone’s) code, I will mess something up / add a bug.

- *I will break the code.*
- *Or worse: it will still run but it will not give me the same results.”*

Solution:

- Use Git
- Write tests

Testing: why?

- Tests define the behavior of your code

Testing

https://remi-gau.github.io/matlab_clean_code_workshop/testing/testing/

Formatting

Questions

- How often do you...
 - ... brush your teeth? Only before you go to the dentist?
 - ... clean your code? Only before you submit a paper?

Formatting: why?

DESK ENTROPY

Definition

Desk entropy is a spatiodynamic quantity that measures a workspace's degree of disorder, and the inability to find anything when you really need it.

Any spontaneous activity, whether productive or unproductive, disperses matter and increases overall desk entropy.

Efforts to reverse desk entropy are temporary, and inevitably decrease over time.

[PhD \(comics\)](#)

Formatting: why?

Technical debt

“implied cost of additional rework caused by choosing an easy (limited) solution now instead of using a better approach that would take longer.”

PhD (comics)

Formatting: how?

The scout rule

“Always leave the code better than you found it.”

Formatting

https://remi-gau.github.io/matlab_clean_code_workshop/formatting/

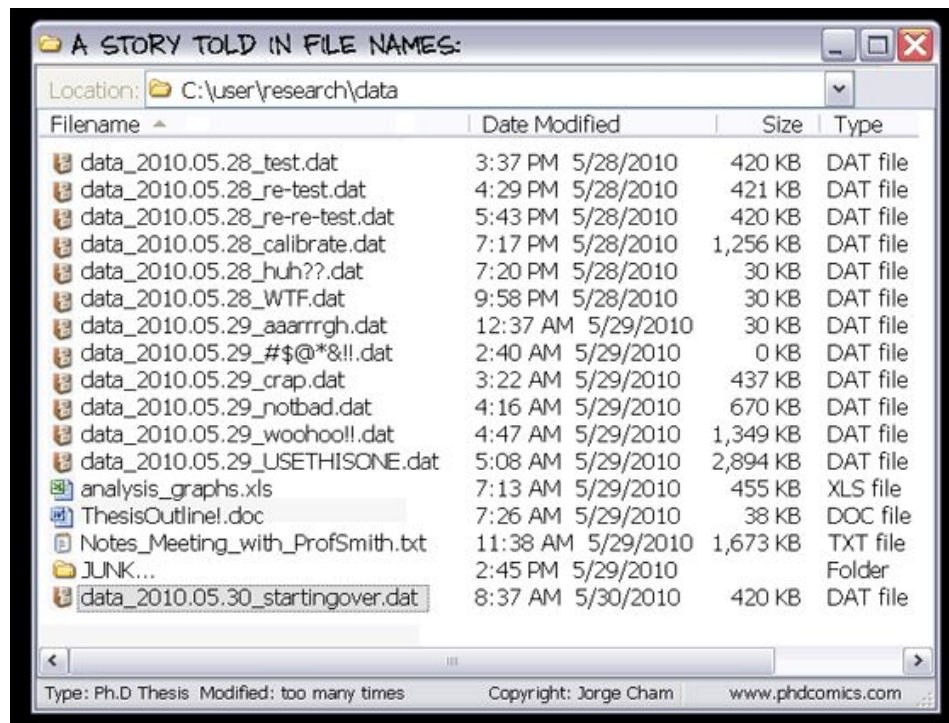

Refactoring

Questions

- Who has copy pasted code?
- Who has written a MATLAB
 - script?
 - function?
- Who has scripts / function that are
 - > 500 lines long?
 - > 1000 lines long?
- Who has old code they do not understand?

Technical debt

Fiction

Technical debt

Reality

[Link to some old code of mine.](#)

Refactoring

- Refactoring: change the code but not its behavior.

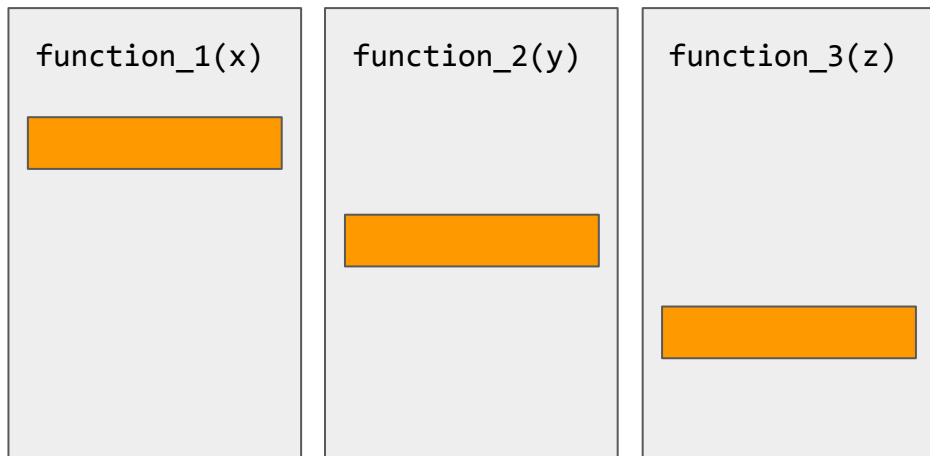

Duplication

Duplication

- Don't Repeat Yourself (DRY)
- Copy-pasta leads to [spaghetti code](#).

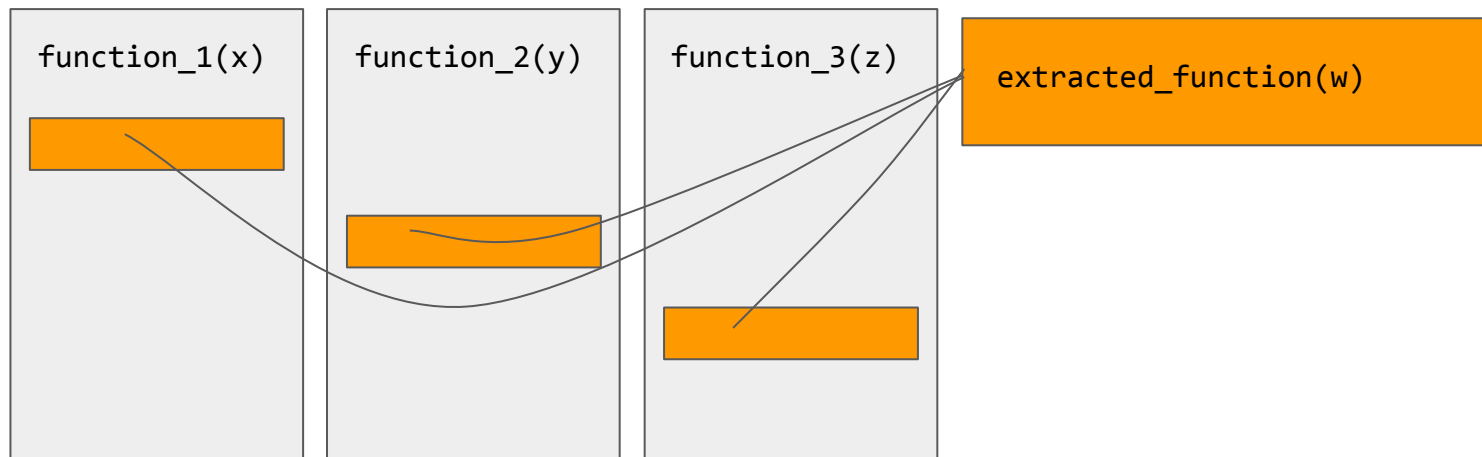

Duplication

- Don't Repeat Yourself (DRY)
- Copy-pasta leads to [spaghetti code](#).

Duplication

- Don't Repeat Yourself (DRY)
- Copy-pasta leads to [spaghetti code](#).

Duplication

- Don't Repeat Yourself (DRY)
- Copy-pasta leads to [spaghetti code](#).

Single responsibility principle

Single responsibility principle

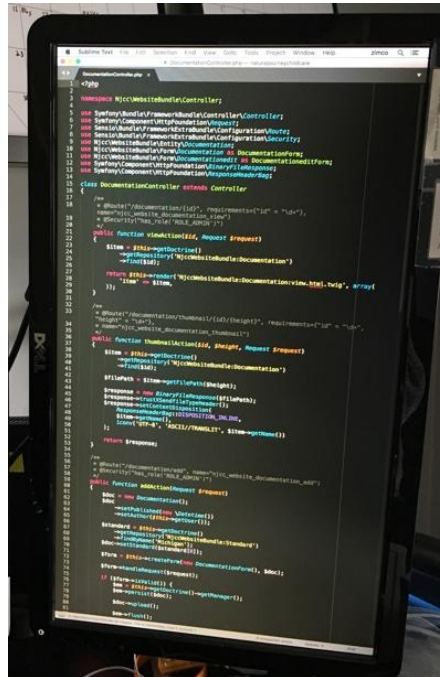

“A function should only ever do one thing and do it well.”

Single responsibility principle

rule of thumb: “function should be shorter than one screen height”

Single responsibility principle

BAD rule of thumb: “function should be shorter than one screen height”

Single responsibility principle

@RemiGau · Follow

I can finally add comments in my life the way I comment my code.

How could I live without this until now?

Comments

- *Comments are for things that cannot be expressed in code.*
- *Comments which restate code must be deleted.*
- *If the comment says what the code could say,
then the code must change to make the comment redundant.*

Deep nesting

```
if
elseif
elseif
    switch
        case
            for
                if
                end
            end
        case
            while
                If
                    break
                elseif
                else
                end
            end
        end
    end
end
end
```
